

Plated Nonwoven Fabric Tape

(3D shape following shield)

Under
development
Scheduled to be
installed in 2027

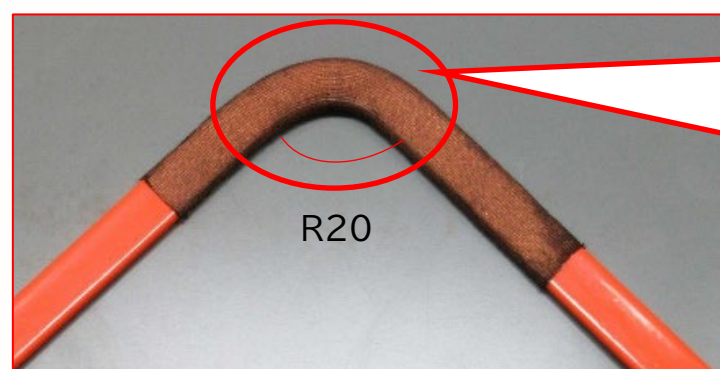

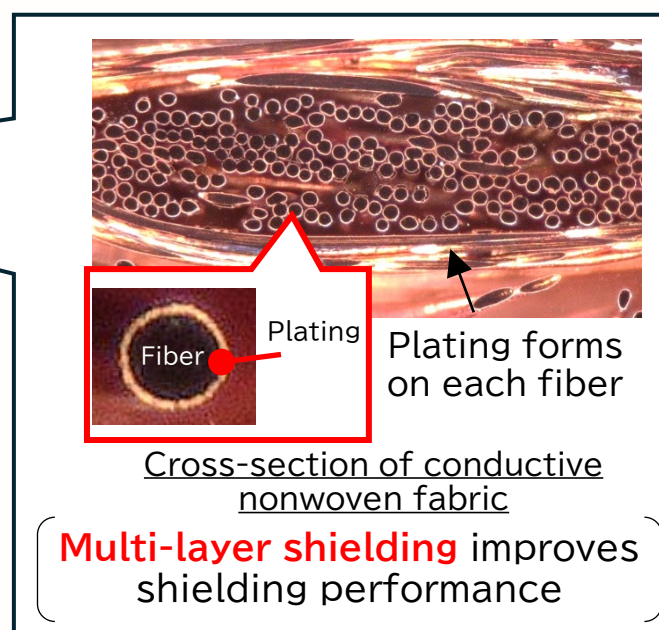

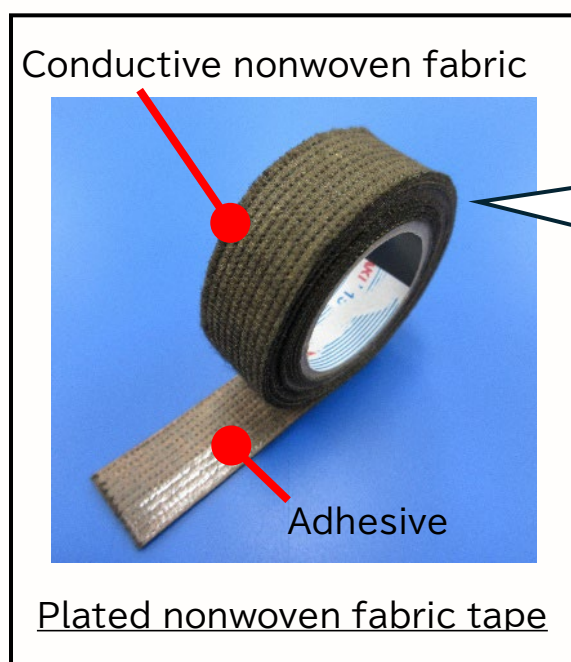

Shielding components adaptable to different wire harness forms

Background or Challenges

Increasing demand for shielding components that can adapt to various forms of wire harnesses, which are becoming larger and more complex with electrification

Solutions to Challenges or Features

- 1 Adaptable to various complex shapes of wire harnesses
- 2 Shielding components with stable shielding performance
- 3 Reduces vehicle weight by using plated fibers

Bendable even after wrapping onto wire harness
