

# Next Generation Cockpit Domain Controller

Under development  
Scheduled to be installed in 2026

Cockpit domain controller meeting a wide range of customer needs

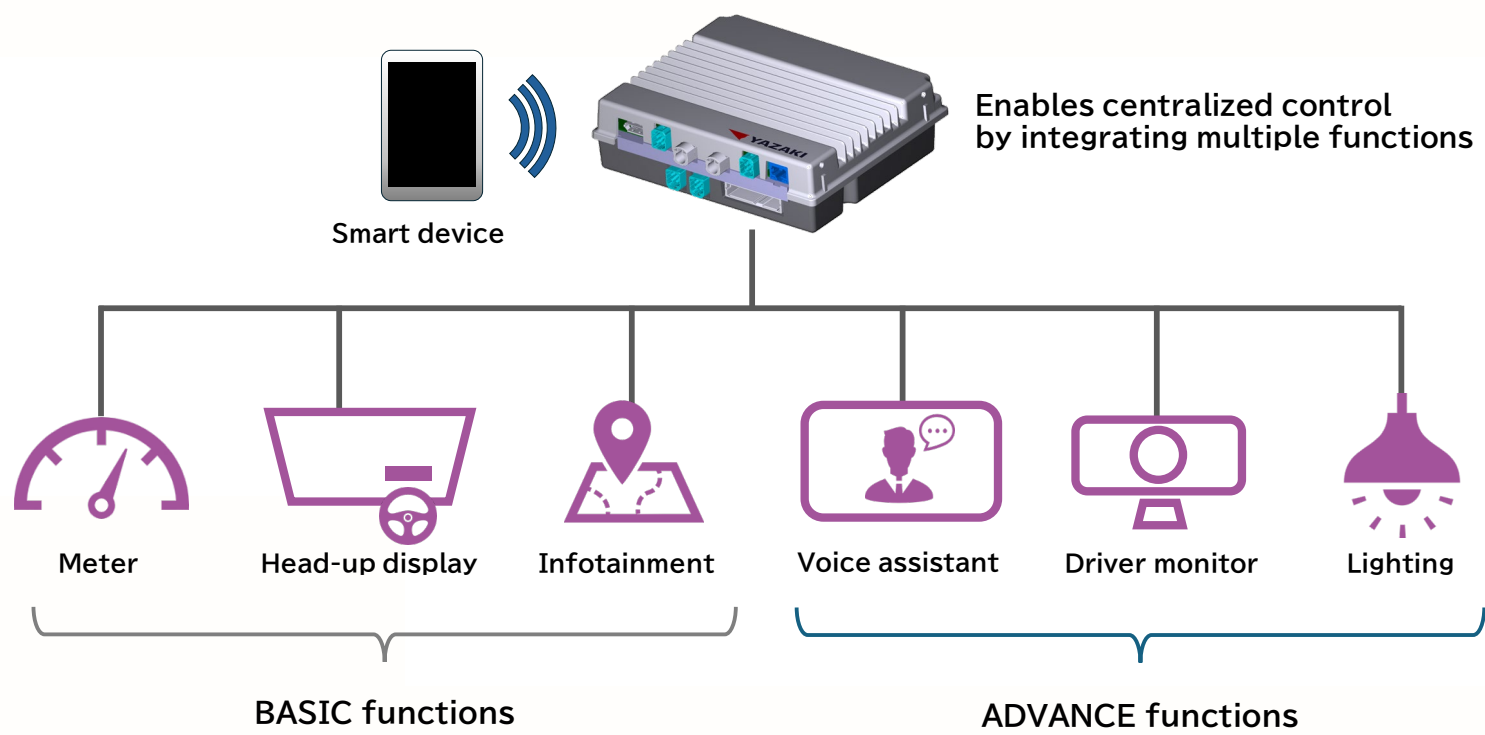

## Background or assignment

Provides a cockpit domain controller with ADVANCE functions developed by YAZAKI, in addition to YAZAKI's strong functions such as meters and head-up displays, and proposes UX with high additional values meeting various needs

## Solutions to Challenges

- 1 Integration: Centralized control and space-saving by integrating multiple functions
- 2 UX with high additional values: High grade 3D graphics can be customized according to user's preferences

### Main performance, specifications and structure

### Customization features according to user's preferences
