

Standard LED Unit

Mass-Produced Product
Since 2016

Standard LED units designed for use in various parts can entirely coordinate in-vehicle illumination

Background or assignment

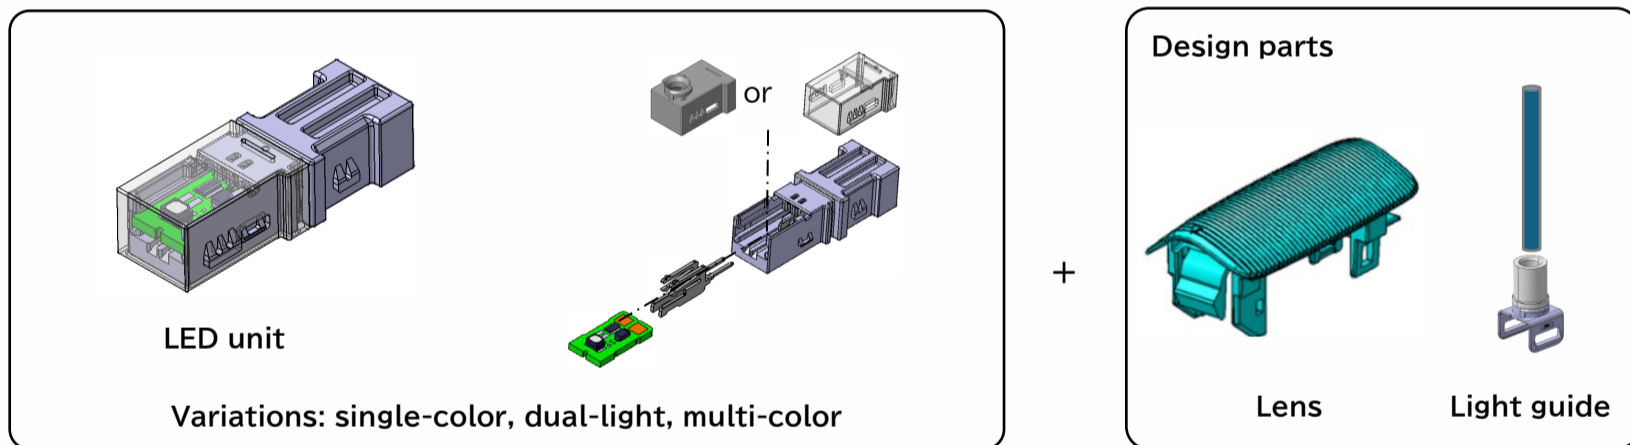

With growing demand for in-vehicle illumination, costs caused by additional lightings and replacement of bulbs with LEDs have increased

Solutions to Challenges

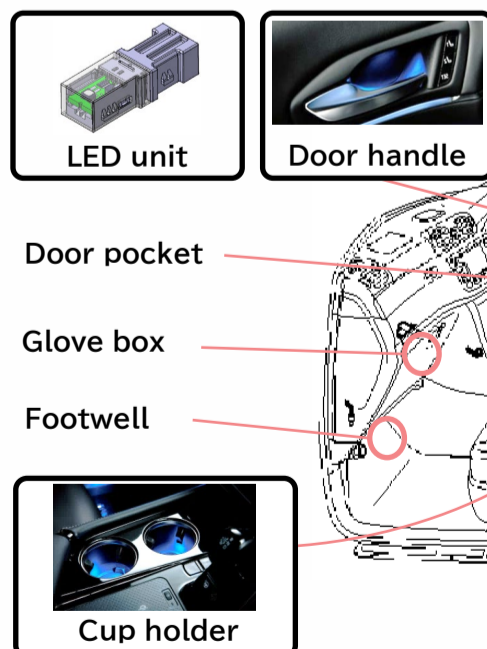

- 1 Reduces costs of development, mold, and components by standardizing LED units
- 2 Reduces design man-hours for vehicles and lenses by standardizing mounting shapes

Main performance, specifications/structure

LED unit used independently or with design parts

Used independently

Used with design parts
