

Environmental Recycling Business (Community-based Business)

Yazaki is doing environmental recycling business at one location in Japan, based on the philosophy of "Continuing to be a provider that is needed by the local community".

Background or Challenges

Yazaki started environmental recycling business to create jobs and contribute to the environment as the shift of production bases for wire harnesses from Japan to overseas accelerates, leading to domestic industrial hollowing. Activities to achieve "Net-zero emissions" of greenhouse gases that cause global warming are required.

Solutions to Challenges

- 1 Manufacture of "Aro Eco", a buffer made mainly from waste paper.
- 2 Can be disposed of as combustible waste because the main raw material is plant-based.
- 3 Excellent in cushioning, easy-to-process, and can be provided as a buffer meeting customer needs.
