

Electrode Coating Liquid for Capacitor and Battery

Contribute to longer life and shorter charging time without using any insulating polymer binder.

- Need longer life of batteries and capacitors as electrification of vehicles.
- Need drastically shorter charging times due to electrification.

Feature

1

Suppress heat generation during rapid charging and improve life of capacitors and batteries.

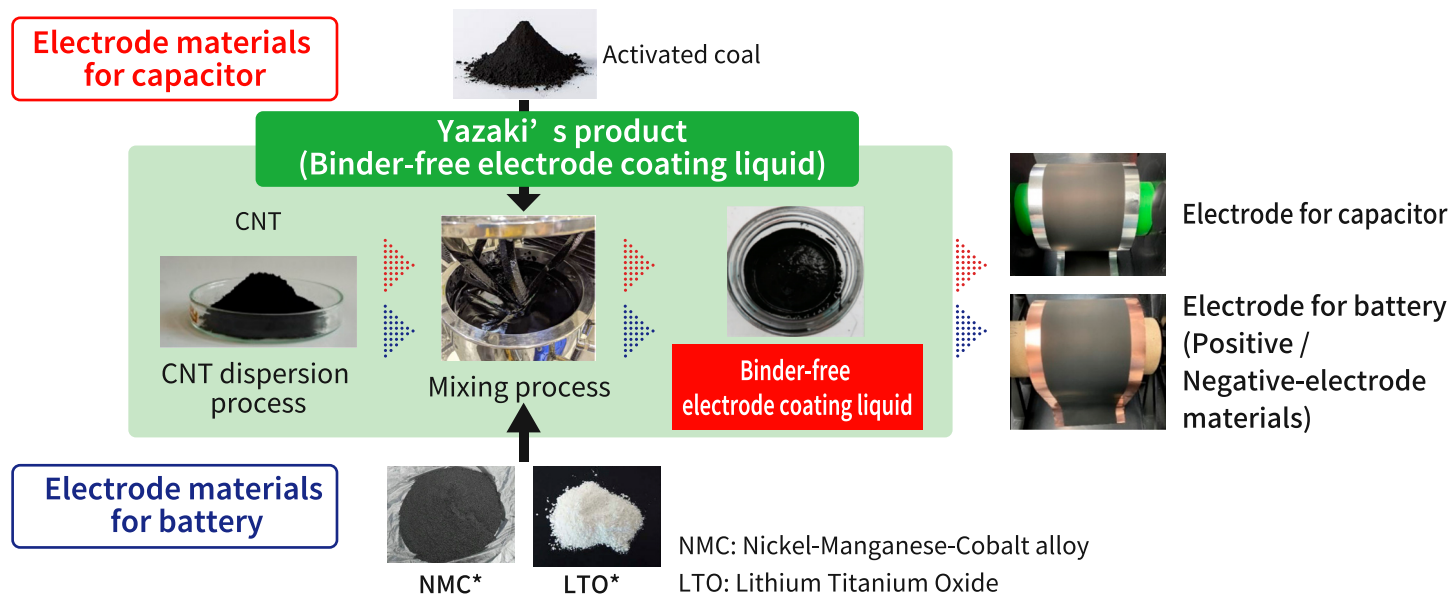

2

Reduce internal resistance of capacitors by about 40% due to binder free.

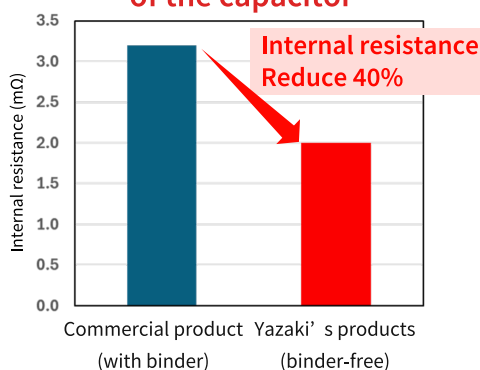

3

10 times faster charging than before due to binder free.

Performance/Specification

Internal resistance of the capacitor

Charging speed of the battery
