

- The agent appears on the automotive display.
- Interact with drivers in a natural way.
- Control devices and get information through dialogues.

Autonomous driving is changing cockpits from primarily driving to comfort. Modern cockpits are increasingly advanced in designs and functions. Therefore, each company has just started to examine the installation to vehicles for high specification of generative AI technologies.

Feature

1

Distracted driving is prevented by natural dialogues with ChatGPT.

2

The interface voices to the agent display enables device operation in speech.
