

Copper Recycle

- Processes covering the melting of raw materials, production of wire rods, wire thinning and covering
- Formation of a recycling-based on society by recycled waste materials

"Trash bin" is "Recycle bin"

In 1957, Sadami Yazaki, the founder of the Yazaki Group, introduced the Thomas Furnace, which reuses the scrapped copper, in an effort to recycle resources. Since then, Yazaki had been working on the utilization of natural energy.

Feature

1

Collect waste wires since 1971 for recycling efforts

2

Used approximately 16,500 tons of recycled materials in 2022

Performance/Specification

Manufacture of Electric Wires Using Waste Material from Production and Used Electric Wires
