

Sensor HUB

Autonomous driving sensor signals are integrated in each area for reducing number of wire harnesses and downsizing autonomous driving ECU.

Increase in the number and variety of connectors in autonomous driving ECU with more on-board vehicle periphery monitoring sensors, such as cameras, due to enhance autonomous driving functions.

Feature

1

Reducing the number of connectors in an autonomous driving ECU

2

Downsizing an autonomous driving ECU

3

Making a common hardware in autonomous driving ECU (absorption of specifications difference)

Performance/Specification
